

Microfinancing

Gerold LUDWIG

Project discription:

Microcredit:

Missing Money could be one of the main problem for the people in the Danube delta. They need it if they want to rebuild their infrastructure. They need it if they want to build guest houses. They need it for their productive space, for planting herbs,.... These are just a few examples where money could be used to improve daily live of the people in the Danube delta. So one pillar of my project "Mircofinancing" should be Mirco Credit as an option for financing their project which were possibly created by some student of the UT Vienna.

Microinsurance:

The second pillar should make it possibly that the inhabitants of the Danube delta be proected against (some) specific, like crop failure, fire or natural disasters, perils. To achieve that, the people have to pay a small premium and in case of an emergency the insurance will compensate their loss.

Maybe some other forms of microfinancing will follow

Target groups:

Citizens from the C.A. Rosetti municipality but also for other parts of the Danube delta if there is a demand.
